

mBizTrack for BlackBerry®

ASSET TRACKING - FLEET MANAGEMENT - LOCATION BASED DISPATCH - COST EFFECTIVE SOLUTION

With Wallace Wireless mBizTrack solution for BlackBerry, organizations are able to manage their workforce more effectively; track their fleet vehicles; and perform location based dispatch operations.

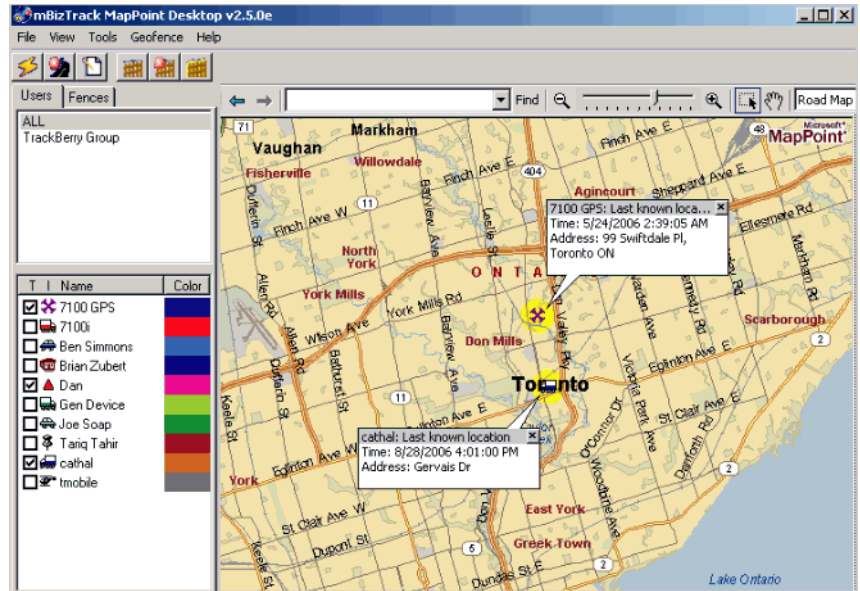

The mBizTrack Solution

The mBizTrack solution enables organisations to track, in real time, the location of their users. This enables work orders to be dispatched more efficiently; routes planned more effectively; and can be a critical tool in accident and disaster recovery.

Integrated with a complete desktop mapping solution and full remote client administration, the Track & Trace solution can add Location Based Services to any BlackBerry deployment.

The mBizTrack Technology

The mBizTrack solution is designed to work with Bluetooth enabled BlackBerry handhelds. Coupled with a BlackBerry GPS enabled device, and the mBizTrack software from mBiztech, the BlackBerry is able to stream coordinates back to the server. An Administration Console enables the Administrator to remotely set specific parameters, such as; how often points should be uploaded to the server; and how long data should be retained on the handheld. Each handheld is capable of uploading it's location, speed, heading, distance traveled, time captured, and the device PIN number.

Microsoft MapPoint Integration

The mBizTrack solution integrates directly with Microsoft's MapPoint product to provide a cost effective system. The MapPoint integration includes a desktop application that can display each user's current location. It can also be used to display a user's path, including historic data.

GeoFencing Features

Geographic regions can be defined and assigned to users. Alerts and PDF reports can be generated whenever a user enters or leaves an assigned GeoFence area.

Flexible Deployment

With an easy installation procedure, the mBizTrack solution can be deployed in either a BlackBerry Enterprise Server (BES), or in a non-BES environment, making it an ideal location-based solution for both large and small/medium sized businesses.

The mBizTrack system can also operate in combination with the mBizForms solution from Wallace Wireless, enabling the ability to dispatch work orders, and other relevant information to BlackBerry users based on their location.
