

mDB Enterprise BlackBerry™ Edition

Alliance Member

OFF THE SHELF, SECURE MOBILE DATA ACCESS FOR LOTUS NOTES, ORACLE, SQLSERVER, DB2 & OTHERS

With mDB Enterprise, BlackBerry users can dynamically access corporate database information directly from their handheld. Examples include: salespeople checking order information, field technicians editing trouble tickets and executives accessing summary reports. Users can work on or off-line ensuring access to information even outside network coverage.

BlackBerry users can save time and provide their clients and organizations with timely information as mDB enables users to query and update information from the field. The efficiencies will be company wide as BlackBerry users improve customer service delivery, streamline the order entry process, eliminate paper forms and data re-entry and provide many other business process improvements.

APPLICATION SECURITY

The mDB server component integrates with the BlackBerry Enterprise Server using the Mobile Data Service providing a secure tunnel with end-to-end data encryption for users to access their corporate databases from outside the Enterprise firewall.

BlackBerry users can access Lotus Notes, Oracle, SQLServer, DB2 and other database systems simply by logging in using their ID and password. Once authenticated by the system, database records can be viewed and edited in real-time for all authorized personnel to access and review.

SEAMLESS INTEGRATION

The mDB Enterprise solution is designed to integrate seamlessly with existing corporate data systems, ensuring quick and easy set-up by the network administrator.

mDB Enterprise - BlackBerry Edition is available now on the following mobile platforms:

- * BlackBerry 88xx series
- * BlackBerry 87xx series
- BlackBerry 71xx series
- BlackBerry 72xx series
- BlackBerry 75xx series

FEATURE SUMMARY

- Wireless Access**
Dynamically access and synchronize data between BlackBerry devices and Notes databases.
- Automatic Updates**
New and modified records are automatically pushed out to the users BlackBerry, ensuring they always have the most up to date information.
- Add, Delete, Modify**
Users have the ability to add, delete and modify records, even when offline.
- Download Control**
Users can control the records they download to their BlackBerry by specifying search criteria for any or all the database attributes.
- Advanced Search**
Users can perform advanced searches on their local database to only view the records they are interested in.
- Easy Administration**
An easy-to-use graphical administration tool allows the Domino administrator to control which databases are accessible by the mobile users. The administrator can also limit access to specific columns within each database.

The mBiztech line of software products for BlackBerry. Smart solutions for a wireless workforce.
