WIC DB enables business operations to be carried out by mobile workers, providing them with dynamic database access to information and business intelligence.

- » Using mobile devices enables users to access, query and update information residing on business database networks and enterprise systems.
- » Provides advanced mobile capabilities out-of-the-box
- » Easy to install, live in hours not days.
- » Supports enterprise-wide mobile operators, from a field technician locating a fiber optic panel, to the corporate business user accessing key performance indicators.

How do I turn our BlackBerry investment into competitive advantage?

WIC Mobile Enterprise provides direct database access, enabling WIC users to:

- » Query and update database content while in the field
- » Save time by providing clients and head office with timely, critical information
- » Increase customer satisfaction by keeping them informed that you're informed

How do I increase the return on the investment we made in the BlackBerry?

Increase productivity of mobile workers by enabling them with interactive access to live business data in areas such as;

- CRM
- billing information
- inventory

With the right information WIC Users can make better decisions anytime, anywhere.

How can our workforce save time searching for important data?

WIC Mobile Enterprise enables the mobile team by providing interactive access to corporate data;

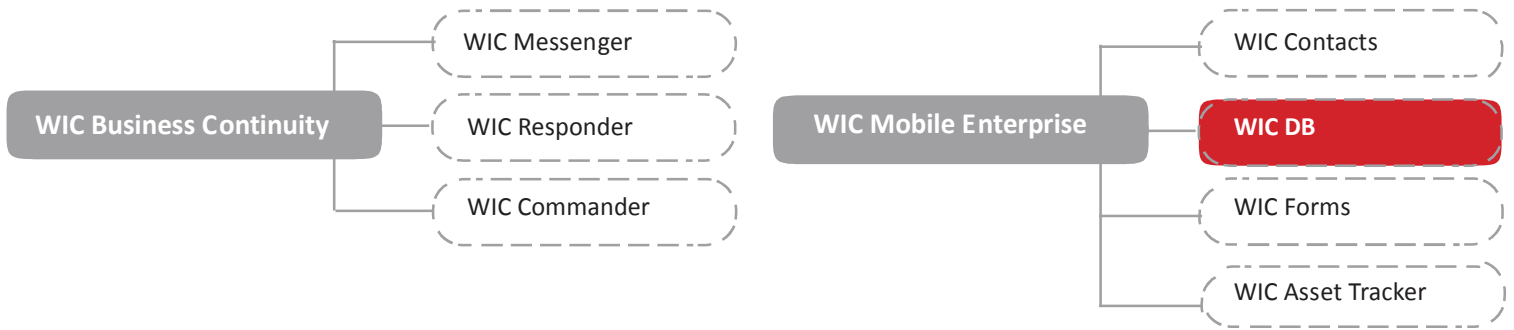

- off the shelf, secure mobile access to Lotus Notes, Oracle, SQL Server, DB2 and others
- enable the mobile workforce to improve customer service delivery, & streamline the order entry process

WIC DB provides interactive, secure mobile data access to corporate databases, enhancing the mobile worker's productivity by providing information such as CRM, billing and product inventory. WIC DB users can work on or off-line, ensuring access to information even outside network coverage, with offline work being cached and uploaded once connectivity is available.

Corporate Control

The WIC Administrator is able to control which databases are accessible by the mobile users, as well as limit access to specific columns within each database. WIC DB enables the user to set advanced search criteria for any of the database attributes, and new and modified records are automatically pushed out to the user's mobile device, synchronizing data between the handheld and the corporate database, and ensuring that users always have the most up-to-date information.

Benefits of Database Access

WIC DB provides wireless workers with timely information via interactive, secure mobile data access to corporate databases such as Lotus Notes, Oracle, SQLServer, DB2 and others. This provides such efficiencies as improvements to customer service delivery, and streamlining of the order entry process, with examples including salespeople checking order information, field technicians editing trouble tickets and executives accessing summary reports. WIC DB provides advanced mobile capabilities in an out-of-the-box solution that is easy to install and can be up and running in a matter of hours.
